with its many beautiful colour pictures this book gives fascinating insights into the unusual forms and behaviour of matter under extremely high pressures and temperatures these extreme states are generated among other things by strong shock detonation and electric explosion waves dense laser beams electron and ion beams hypersonic entry of spacecraft into dense atmospheres of planets and in many other situations characterized by extremely high pressures and temperatures written by one of the world's foremost experts on the topic this book will inform and fascinate all scientists dealing with materials properties and physics and also serve as an excellent introduction to plasma shock wave and high energy density physics for students and newcomers seeking an overview this second edition is thoroughly revised and expanded in particular with new material on high energy density physics nuclear explosions and other nuclear transformation processes

this book first published in 1992 examines defence issues as the twentieth century drew to a close with the end of the cold war many of the threats to european security such as the threat of nuclear war disappeared new ones however were emerging the rise of nationalism the spread of weapons of mass destruction to politically unstable countries the increase in world population the debt crisis all these contributed to security problems that needed to be resolved the book assesses the possibilities for future european defence and the role that the united states would play in it will it be prepared to stay in europe under european leadership or must it dominate it also considers the capabilities offered by new military technology and the need for control of weapons of mass destruction

with revolutionary changes in nanotechnology nt now on the horizon many countries have started major research and development r d programmes which are mainly civilian often overlooked are military r d programmes in particular those of the us government this is the first systematic and comprehensive presentation of the potential military applications of nt in ten to twenty years these applications may include extremely small computers robots missiles satellites launchers and

sensors they may also provide lighter and stronger materials for vehicles and weapons implants in soldiers bodies metal free firearms autonomous fighting systems and smaller chemical and biological weapons these potential uses raise strong concerns this assessment is made from a viewpoint of international security considering the new criteria of dangers for arms control and the international law of warfare dangers for stability through potential new arms races and proliferation and dangers for humans and society some military applications such as computers will be so close to civilian uses that limits are impractical others such as sensors for biological warfare agents may contribute to stronger protection against terrorist attacks and better verification of compliance with arms control treaties for preventive limitation of these new technologies specific approaches are proposed that balance positive civilian uses and take into account verification of compliance with a view to international peace and security not national military strength this book will be of great interest to scholars of military technology non lethal weapons disarmament and security studies in general
